Safe storage of tools

With the ZOLLER tool trolley you always have your tools, adapters and attachment holders safe and at hand next to your setting and measuring device. It is the robust and workshop-suited solution for the transport and temporary storage of tools and tool parts.

Thanks to the space-saving Y-shape of the inserts, even more tools can be placed on the individual rails, as the tool inserts are offset. This means that the tool trolley can transport over 100 tools. For each tool holder with diameters from 0,98" to 3,94" (25 to 100 mm) you will receive the appropriate inserts. Various inserts for the interchangeable frames ensure the safe transport of a wide variety of tool holders. A storage possibility for papers and drawings is attached to the tool trolley body.
