

Automation Solution »roboSet/venturion«

For Fully Automated Tool Measurement

The Solution for High Tool Throughput

»roboSet« loads your ZOLLER measuring machine around the clock completely autonomously. The tools are measured with high-precision, automatically and autonomously on the presetting and measuring machine in transmitted light and recorded in detail. Even complex measuring tasks can be performed completely automatically and the 100% check is guaranteed.

Thanks to the robot's automatic path correction during every loading, the »roboSet«, in combination with the ZOLLER »venturion«, offers high levels of reliability. The automation system comes in the optimum configuration — tailored to your production processes, ideal for direct use in every CNC manufacturing environment and for measuring with high tool throughput.
